

TOM POUCE®

PRESENTATION

“TOM POUCE®” is a discreet removable electronic device which you attach to the white cane thus transforming it to an electronic cane.

Thanks to its projected infra red and laser beams, any mobile or immobile obstacle can be anticipated and gives the user a notion of distance. The user can therefore sense a feeling of space and avoid any bumps or collision with impending obstacles, even those at a height.

As an obstacle is detected, the device vibrates to inform the user. This device is provided free of charge by a specialized centre.

USE

Ideal for getting around outdoors, “TOM POUCE®” offers 3 levels of perception:

- Long distance for general movement
- Average distance for a path with obstacles, including those at a height
- Short distance for crowded areas when it is necessary to make your way through

TECHNICAL DESCRIPTION

Range: Adjustable projection from 2 to 15 metres

Height: Up to 2 metres

Weight: 168 grams

Measurements: Length: 95 mm - width: 30 mm – height: 50 mm

Autonomy: 5 hours

Average lifespan: 7 years

Maintenance: Your training centre will service, repair and replace your device at their expense

HOW TO OBTAIN YOUR AID

The centre will provide compulsory training free of charge before receiving your electronic cane “TOM POUCE®”.

Find the nearest training centre (what we do, try out our equipment, assess our training), go to www.visioptronic.com -  contact@visioptronic.com
